Cyber exposures are one of “the” key risks to your business

According to the UK Government’s Cyber Security Breaches Survey 2018, over 4 in 10 businesses and 2 in 10 charities suffered a cyber-security breach or attack in the last 12 months. The survey also reveals that only 27% of businesses have a formal cyber-security policy in place.

Additionally, the World Economic Forum’s 2018 Global Risk Report also placed cyber-attacks and data fraud amongst the year’s top five risks – the first time in history that two technological risks were placed so high.

The GDPR and Data Protection Act 2018 – are you sure you’re fully compliant?

Furthermore, following the implementation of the General Data Protection Regulation (GDPR) in 2018 and the Data Protection Act 2018 (DPA), staying in step with data protection law and cyber-security threats is more important than ever for UK businesses.

4 Reasons to buy IT Security & Cyber Risk Services :

- 1. Manage your Cyber Risks** – identify and develop solutions to tackle key potential exposures to your business processes, systems and customers, which could cause loss or damage.
- 2. Prepare your business for catastrophic interruptions** – plan effectively for disaster contingencies and the reallocation of workflows and key processes.
- 3. Protect your company’s reputation** – put effective cyber controls in place to manage confidential information that you hold, and have contingency plans in place if a breach occurs.
- 4. Improve incident response** – minimise risks from third parties by introducing effective controls to manage breaches and coordinate incident response plans.

How we can help you implement an effective cyber risk management plan

CLEAR have partnered with Risk Factory, who offer cloud-based management systems, onsite consultancy and client engagement support to help you implement a comprehensive program for your IT security and cyber risk needs.
